

‘A SMALL EFFORT GOES A LONG WAY’

VERTICAL GARDENING

Sat Paul Mittal School has been a pioneer in creating responsible citizens and in sensitizing them regarding environment issues. In tune with this, School planned to set up “Vertical Garden” units in the school open corridors and selected walls, for which the students were guided and encouraged to pool in their passion and resources and become members of “Green Brigade” of the school.

Vertical garden is an answer to shrinking spaces in urban areas clamoring for aesthetic beauty. Besides saving a lot of water, vertical garden acts as natural air purifier and coolant. For the vertical garden, Satyans brought empty discarded soft drink bottles.

Students learnt the technique of Vertical Gardening and had hands on experience which made them develop a bond with the plants and nature.
