

## Sat Paul Mittal School hold Maths Buffet for Class II and III students

*“Sneak Maths into Snack.”*

Living with Mathematics can be such an incredible approach. In order to make math interesting for children, a Math buffet of 2D and 3D shapes was organized by Sat Paul Mittal School, Ludhiana on 17<sup>th</sup> August, 2021 for classes II & III. The Maths Buffet was meant to make students understand the basic shapes in Maths – 2D and 3 D shapes and their concepts like: Edges, Faces and Vertices. This fun activity was conducted for classes II & III. Each student was given opportunity for explaining his / her buffet. Students made this event interesting by exhibiting examples of different shapes like Cinnamon sticks for cylinder, cheese balls for sphere, sandwiches for cube etc. Students responded positively when an element of autonomy was incorporated during the class. Cultivating student involvement and engagement was the ultimate focus of organizing this activity. It was heartening to see the children taking such keen interest in presenting their work. This activity- oriented event was a huge success which brought out the innate creativity of the children leading to holistic learning.
